

PHEPREN and The Global Health Network invite you  
to a seminar:

# Immunity Passports: Inevitable? Ethical?

Assuming that recovery from COVID-19 brings a measure of immunity, some have proposed that the detection of antibodies to the SARS-CoV-2 virus could serve as the basis for an 'immunity passport' that would enable individuals to travel or to return to work. While health officials and scientists continue to review the evidence on antibody responses to SARS-CoV-2 infection, critical ethical questions related to stigma, health inequities, and the evidential basis for the use of immunity passports must be addressed. This online seminar, hosted by the Public Health Emergency Preparedness and Response Ethics Network (PHEPREN), will bring together leading experts to discuss these important questions.

## Chair: Professor Jeff Kahn

Director and Professor of Bioethics and Public Policy, Berman Institute of Bioethics, and  
Professor in the Bloomberg School of Public Health, Johns Hopkins University

## Dr Sylvie Briand

Director, Global Infectious Hazard  
Preparedness, World Health Organization,  
Geneva

## Dr. Voo Teck Chuan

Centre for Biomedical Ethics, Yong Loo Lin  
School of Medicine, National University of  
Singapore

## Professor Samia Hurst

Professor of Bioethics at Geneva  
University Medical School

4 May 2020, 13:00 GMT+1
