Diagnostics Working Group Position Paper - Table of Contents

Introduction

Stepwise process for specimen Collection, Handling and processing

1. Performance of Risk Assessment
2. Biosafety Level 2 (BSL-2) rules for laboratories
3. Collection of SARS-Cov-2 specimens
4. Handling Bulk-Packaged Sterile Swabs for Upper Respiratory Sample Collection
5. Individually wrapped sample
6. Packaging, transporting and shipping of SARS-Cov-2 specimens
7. Storage of Sars-Cov-2 specimens

Sample type for COVID-19 diagnosis

1. Nasopharyngeal swab (NP)
2. Oropharyngeal swab (OP)
3. Nasal mid-turbinate swab
4. Nasopharyngeal or nasal wash/aspirate
5. Anterior nares (nasal swab) specimen
6. Sputum
7. Deep Throat Saliva/Gargled specimen
8. BAL, ETA
9. Lung Biopsy
10. Blood/Serum

Analysis of SARS-Cov-2 samples

1. Molecular assays Nucleic acid amplification test (NAAT)
2. Serological testing
3. SARS-Cov-2 Antigen testing
4. Viral culture (Virus Isolation)
5. Virus characterization – Whole genome sequencing/fragment analysis

Decontamination of laboratory environment

Waste management of COVID-19

Conclusion
