What We Mean By Engagement

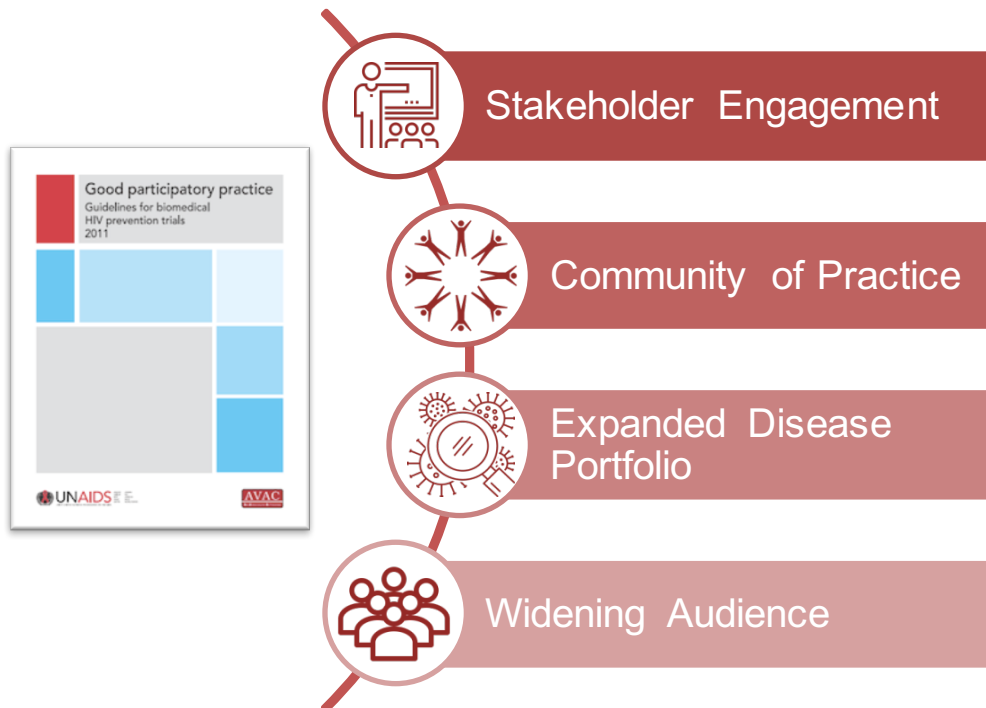

Guidelines for HIV Prevention

Overview of GPP

GPP was designed to provide a consistent **global standard for stakeholder engagement across the HIV prevention research life-cycle**. Since its inception, the role of GPP has significantly expanded

AVAC's Work in 3-Ds

Deliver communities of practice and regional hubs that support implementers across disease areas

Document the experience of GPP to support implementers and disseminate GPP lessons-learned beyond trial site and champions

Demonstrate that value of formalizing GPP in the research process

*Strengthening engagement
through ethics review:*
Focused on HIV prevention trials
Applicable to other infectious diseases

**Coalition to Accelerate & Support
Prevention Research (CASPR)**

International Impact

National adaptations, including innovative mechanisms for implementation, increase the relevance of GPP for national stakeholders and country-specific contexts.

The Treatment Action Literacy Campaign in Zambia, a grass-roots activist group, initiated GPP-focused activities around the PopART study being conducted throughout the country (2013-2018).

Establishment of National CAB in Thailand -- A forum for GPP implementation at a national level (2013).

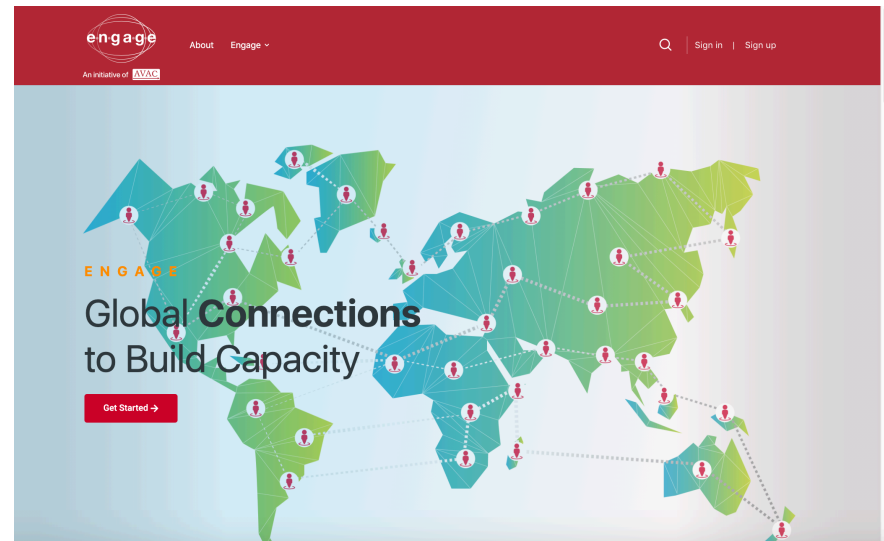

GPP was incorporated into the Ugandan National Research Ethic Guidelines (2014).

Establishment of South Africa National Stakeholder Engagement Forum (2016).
