## PB-SAM Toxicity CRF v1 PB-SAM Number [1][0] [0][0][2] [ ][ ][ ]

## PRE-DEFINED SUSPECTED GRADE 3 or 4 DRUG TOXICITY

The medicines being used in PB-SAM are licensed drugs with a known profile of adverse reactions. Assessment of safety will therefore focus on <u>severe and causally related events</u>. Clinical or laboratory toxicity will be reported if Grade 3 or 4 according to the Division of AIDS table for grading severity of adverse events: <a href="http://rsc.techres.com/Document/safetyandpharmacovigilance/DAIDS">http://rsc.techres.com/Document/safetyandpharmacovigilance/DAIDS</a> AE Grading Table v2 NOV2014.pdf

If abnormalities are known to be already present at enrolment, or are due to other identifiable factors, this need not be reported as a causally-related toxicity. Only record new events whilst the child is receiving study drugs.

Always act in the best interests of the child. When possible, discuss any decisions regarding stopping study drugs because of suspected toxicity with the PB-SAM PI, clinical lead, designee or local safety monitor. They can also prove information on other aspect of management of adverse reactions.

A grade 3 or 4 toxicity event may also constitute an SAE, and should also be reported on an SAE CRF.
