STROKE AND COVID-19: What we know?

Tens of observational studies were published reporting on almost 300 acute stroke cases in patients with COVID-19

Country	IS	ICH	CVST	Total 297	REFERENCES
China	12	2	-	18	Mao et al (JAMA Neurol); Li et al (J Stroke Vasc Neurol); Zhang et al (NEJM)

STROKE AND COVID-19: What we know?

Strokes are been frequently observed in patients with COVID-19, especially critically ill elderly

Many distinct cases (LVO, multiple sites, association with other thromboembolisms and proinflammatory coagulopathy)

Descriptive review of 9 papers
(Munhoz *et al* Arq Neuropsiquiatr May 2020)

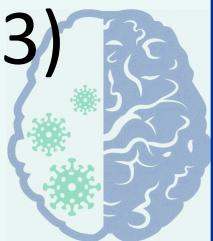

Freq of Stroke among patients with COVID-19 = 2.8 – 5.7%

Descriptive review of 17 papers
(Ellul *et al* Lancet Neurology Jun 2020)

Freq of Stroke among patients with COVID-19 = 1.6 – 6%

88 ischaemic cases & 8 haemorrhagic cases

Time between COVID and neurologic symptoms = 9.5 days (0-33)
19% of cases died

STROKE AND COVID-19: What we know?

Patients with a previous history of cerebrovascular disease have more severe COVID-19

↑ SEVERE COVID in patients with PREVIOUS STROKE *versus* none

↑ ARDS 32% x 19% ($p .028$)

↑ ICU/MV/Death 28% x 16% ($p .021$)

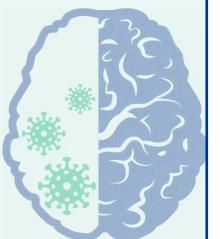

- ↑ vascular risk factors (diabetes, hypertension, vascular diseases)-

Propensity Score Matching and Adjusted (n 241)

↑ Death 14.3% x 13.0% ($p .034$)

↑ ICU/MV/Deaths 32.7% x 19.3% ($p .037$)

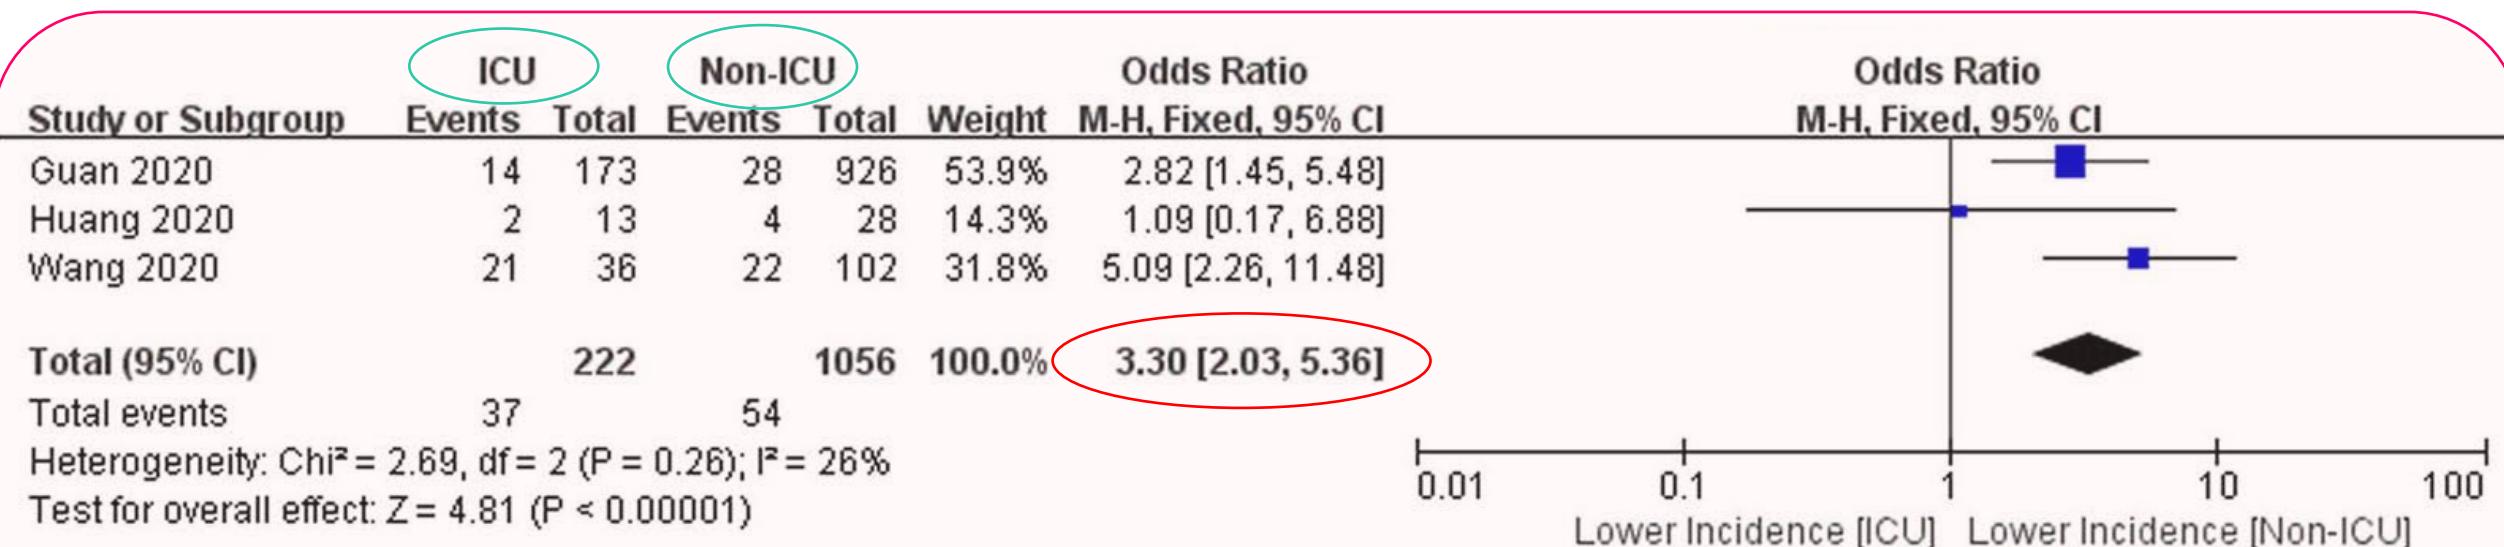

OR 1.95 (CI 1.08 - 3.52; $p .026$)

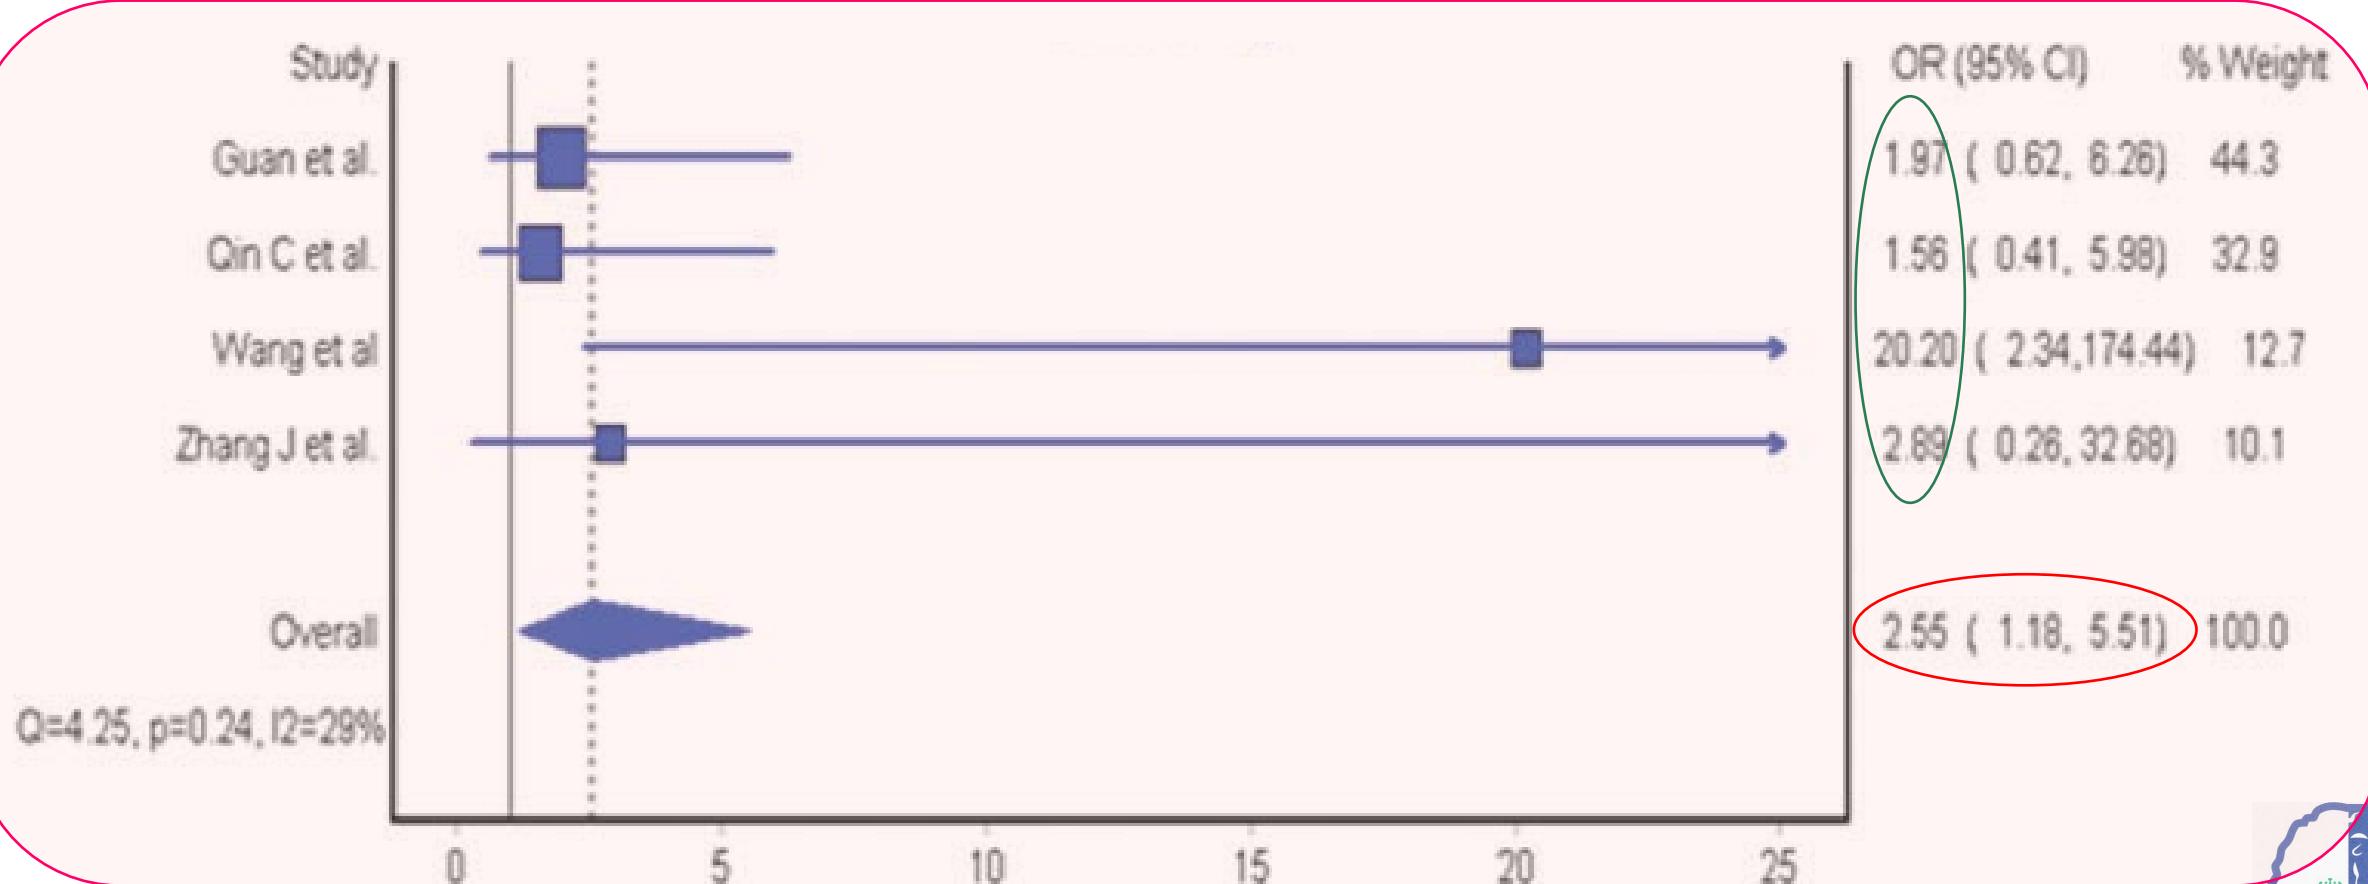

1,875 COVID cases in 1 centre of China (Qin *et al* Stroke)

& VISE-VERSA

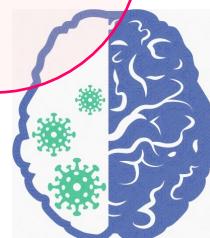

↑ CCVD in ICU COVID *versus* non-ICU → 17% vs 6%

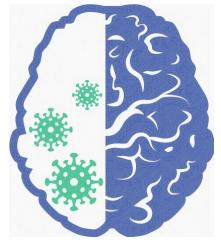

CVD 2.5 X more frequent in severe/fatal COVID

Aggarwal *et al* Int J Stroke

STROKE AND COVID-19: What we know?

Patients with a concurrent acute stroke present
more severe COVID-19

↑ ACUTE STROKE in SEVERE COVID *versus* non-severe

5.7% vs 0.8% ($p .03$)

214 COVID cases in 3 centres of China (Mao *et al* JAMA Neurol)

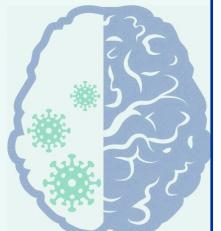

& VISE-VERSA

↑ SEVERE COVID in STROKE cases *versus* non-stroke

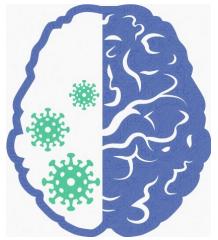

↑ SEVERE PNEUMONIA 80% x 40% ($p .009$)

- ↑ cardiovascular risk factors: 91% x 36% ($p .001$) -

219 COVID cases in 1 centre of China (Li *et al* Stroke Vasc Neurol)

STROKE AND COVID-19: What we know?

Stroke is more severe in patients with COVID-19

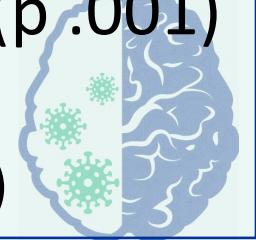

STROKE in COVID *versus* stroke non-COVID

↑ **Large Vessel Occlusion** 32% X 15% = OR 2.4 (CI 2.1–2.7; p .011)
- adjusted for cardiovascular risk factors and ethnicity -

329 patients with stroke in 6 centres of NY-USA (Kihira AJR:216, January 2021)

- ↑ **LVO** (TOAST class) 41% x 24% (p .0001)
- ↑ **TOTAL ANTERIOR CIRCULATION** (Bamford Class) 34% x 6% (p .0001)
- ↑ **CLINICAL SCORE** (NIHSS > 10) 34% x 17% (p .0001)
- ↑ **POOR FUNCTIONAL PROGNOSIS** (mRS 3-6 at discharge) 72% x 48% (p .001)

248 stroke cases in 1 centre of Qatar (Akhtar *et al* J Stroke Cerebrovasc Dis)

STROKE in COVID* versus stroke non-COVID

*swab was done if a positive clinical screening

↑ DEATH OR 64.87 (CI 4.44 - 987.28; $p .002$)

- adjusted for age and NIHSS score -

78 ischaemic stroke in a single centre of NY-USA (Yaghi *et al* Stroke)

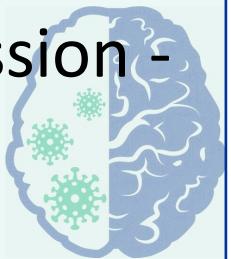

↑ CLINICAL SCORE (NIHSS discharge) 2 x 9 ($p .005$)

↑ POOR FUNCTIONAL PROGNOSIS (mRS discharge) 2 x 5 ($p <.001$)

↑ DEATH 35% x 6% ($p < .001$)

- similar distribution of cardiovascular risk factors and severity at admission -

111 critical cases of stroke in 1 ICU of Italy (Benussi *et al* Neurology)

STROKE in COVID* versus stroke nonCOVID

*swab was done if a positive clinical screening

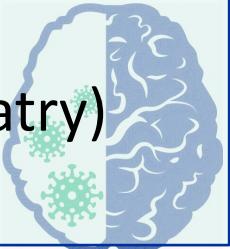

Ischaemic Stroke 94% x 86% (p .03)

- ↑ CRP and D-dimer
- ↑ DEATH 19.8% x 9.6% ($p < .000$)
- ↓ FUNCTIONAL (mRS discharge) 4 x 3 ($p < .000$)

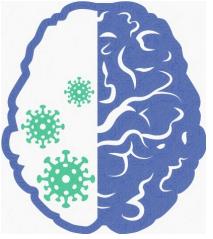

↑ COVID at onset of FATAL STROKE OR 2.1 (1.08-4.13; p .03)

-adjusted for severity at admission and vascular risk factors-

1,507 stroke events in 13 hospitals of UK (Perry *et al* J Neurol Neurosurg Psychiatry)

What we still need to know?

Are the observations on stroke and COVID-19 just a concurrence due to the high force of the pandemic?

Or in fact could the SARS-CoV-2 cause stroke?

STROKE in COVID *versus* influenza admissions

1.6% x 0.2%

OR 4.6 (CI 1.4 - 15.7)

-adjusted for vascular risk factors and ICU admission-

1,916 COVID cohort vs 1,486 influenza historical cohort

2 centres of USA (Merkler *et al* JAMA Neurol)

What about a reverse causation or
a two-way causal relationship?
