

# REDe / ZIKAction / Universidade de Brasília Artificial Intelligence Applied to Health 2021

Researchers from the University of Brasília developed a project called “Artificial Neural Network Protocol in Dermatology”, aiming to validate a Convolutional Neural Network (CNN) as an alternative preliminary diagnostic system, based on photographic images instead of biopsy, when screening in an outpatient healthcare setting in Brazil.

This workshop proposes a series of lectures and open discussion sessions envisioned to:

- Clarify the main concepts of Artificial Intelligence, Artificial Neural Networks applied in Health
- Share the results of the project with the wider community
- Foster the discussion about the importance of AI.
