**PRE-DEFINED SUSPECTED GRADE 3 or 4 DRUG TOXICITY**

The medicines being used in PB-SAM are licensed drugs with a known profile of adverse reactions. Assessment of safety will therefore focus on severe and causally related events. Clinical or laboratory toxicity will be reported if Grade 3 or 4 according to the Division of AIDS table for grading severity of adverse events: [http://rsc.techres.com/Document/safetyandpharmacovigilance/DAIDS\\_AE\\_Grading\\_Table\\_v2\\_NOV2014.pdf](http://rsc.techres.com/Document/safetyandpharmacovigilance/DAIDS_AE_Grading_Table_v2_NOV2014.pdf)

If abnormalities are known to be already present at enrolment, or are due to other identifiable factors, this need not be reported as a causally-related toxicity. Only record new events whilst the child is receiving study drugs.

Always act in the best interests of the child. When possible, discuss any decisions regarding stopping study drugs because of suspected toxicity with the PB-SAM PI, clinical lead, designee or local safety monitor. They can also provide information on other aspects of management of adverse reactions.

A grade 3 or 4 toxicity event may also constitute an SAE, and should also be reported on an SAE CRF.

**1. STUDY MEDICATION DETAILS**

<p><b>1.1. Which study drugs is the child receiving?</b></p> <p>a) <b>Pancreatic Enzymes/Placebo</b></p> <p>i. Date and time of start</p> <p>ii.
