

Improving Sensitivity

Our Mission

Our mission is to develop a platform for early cancer detection using specific biomarkers through liquid biopsies that is accessible to the entire world population, generating social, economic and scientific value.

Our Vision

To contribute with equity in access and quality health care, allowing early cancer diagnosis and improving survival rates and therefore to save lives.

Who we are

Epiliquid is a startup developed in the field of personalized precision medicine, created with the aim of providing solutions to screening, diagnosis and follow-up of cancer patients. Founded in 2021, Epiliquid is the result of a successful partnership between the scientific-academic and private sectors. We have a young, multidisciplinary team work that brings together professionals from science and technological innovation.

Our Team

Emanuel Campoy
