

Winning the Publishing Game: Welcome to Day 1!

Jocalyn Clark MSc PhD FRCPE FCAHS

International Editor, The BMJ

Honorary Associate Professor of Global Health, University College London, UK

Adjunct Professor of Medicine, University of Toronto, Canada

former Executive Editor, The Lancet

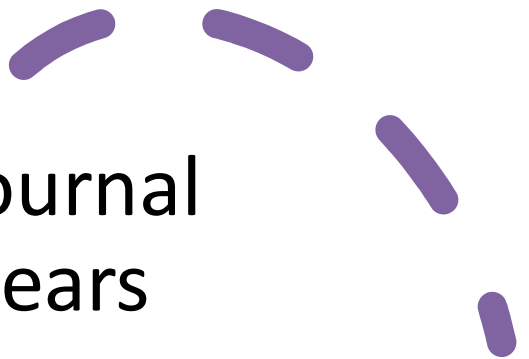

former Executive Editor icddr,b, Bangladesh

former Senior Editor, PLOS Medicine

Want to
publish in
high impact
medical
journals?

- 
- Professional journal editor for 22 years
 - 100s of publications, 100s of rejections
 - I offer a unique & evidence-based approach to writing for publication
 - I teach writing in my personal capacity

Our programme

Today 11.00 – 18.00

Lunch at 13.00 Tea at 16.00

**Understand the game
and the players**

**Make a plan for your
paper**

Take a 4-Step Process

Tomorrow 9.00 – 16.30

Tea at 11.00 Lunch at 13.00

**Continue to draft your
paper**

***Publication ethics
Writing editorials***

Commit to your plan

My goal.
At the end of
the
workshop:

You will have a draft paper

You will have a target journal, a
deadline, and a plan for
finalising and submitting your
paper

You will have new knowledge of
the publishing process and how
to realise your writing and
publication goals

1 INTRODUCTIONS AND REFLECTIONS

Why Publish?

- To disseminate new knowledge
- To change practice or policy
- Papers are a measure of research output
- Publications are central to promotion, tenure, merit, career advancement
- It's your job, it's your responsibility

Why not?

Barriers to writing:

Takes time

Hard to get started

It's miserable

Why should the world care about what I have to say?

Nothing to say

Where could I publish?

What I write might be harshly criticised

Competition in journals is fierce

- 900,000 new citations in Medline each year:
17,000 per week
- Rejection rates:
 - Physical sciences 25%
 - Humanities 70%
 - *General medical journals* 90-95%
- Far more volume of submissions than available space in journals
- Much that is rejected is worthy research

Why the big medical journals?

- Among the most influential media in the world
- *Have impact* – discourses, agendas, policies, practices, reputations
- Mix of science and opinion
- ‘Magazine’
- Exist in a competitive market
- Edited by professional editors

Global Health

Addressing the Challenges to World Health

A collection of articles on population health around the world, including a new series of Global Health review articles as well as Perspective and research articles.

REVIEW ARTICLE
Globalization, Climate Change, and Human Health
April 4, 2013 | A.J. McMichael
Climate change affects the range of pathogens and temperatures to which populations are exposed. This article reviews the nature of these changes and explores how efforts to mitigate climate change could be of value to the global community.

REVIEW ARTICLE
Governance Challenges in Global Health
March 7, 2013 | J. Frank and S. Moon
In this article, the authors argue for a coordinated (i.e., a governed) international response to a variety of health issues that affect people worldwide.

ORIGINAL ARTICLE
Antitubal Therapy for Cryptococcal Meningitis
April 4, 2013 | J.N. Day and Others
Determining the best therapy for HIV-associated cryptococcal meningitis in resource-poor settings is controversial. In the trial in Vietnam, initial therapy with amphotericin B with fluconazole had better outcomes than amphotericin B alone or with fluconazole.

GLOBALIZATION AND HEALTH

Dr Jocelyn Clark - Winning the Publishing Game - 2025

EXERCISE

THE BIG QUESTIONS

Who is your target audience?

Your editor

What is a good paper?

A published paper

WHAT DO EDITORS WANT

What do editors want?

- Importance
- Originality
- Relevance to the audience
- True
- Interesting/ “wow”
- Clearly written

Tells us something new

- New treatment
- New population
- New knowledge of disease distribution (epidemiology)
- New knowledge of the future (modeling)
- New information that contradicts dogma
- Global importance

What is peer review

- Review by peers
- Includes:
 - Internal review (by editorial staff)
 - External review (by experts in the field)
- Reviewers recruited by invitation, through volunteering, and by authors' suggestions

Why does this matter?

- You're no longer just in the science business, you're in the marketing business
 - You have a product for the marketplace
- Journals have more supply than space
 - Competitive marketplace
- Your market research, negotiation and management skills become important
 - Built on alignment of interests

THE IDEAL PAPER

The ideal paper

- Suitable for the journal
- Short
- Follows appropriate structure
 - IMRaD for original research
 - Other formats for policy analysis, editorials etc.
- Clearly written and presented
- Avoid “pithy” errors (typos, numerical presentation) by doing your own peer review

ICMJE Guidance

International Committee of Medical Journal Editors

www.icmje.org

Welcome to the EQUATOR Network website – the resource centre for good reporting of health research studies

Too often, good research evidence is undermined by poor quality reporting.

The EQUATOR Network is an international initiative that seeks to improve reliability and value of medical research literature by promoting transparent and accurate reporting of research studies.

Highlights

EQUATOR Spanish website

New site launched on 16 July 2010 in collaboration with the Pan American Health Organization (PAHO). Find out [more](#) and visit the [site](#)

The EQUATOR Network is funded by:

Structure is everything

- **I**ntroduction
- **M**ethod
- **R**esults
- **(A**nd)
- **D**iscussion

I

M

R

D

The ideal introduction (2)

- Why did we ask this question?
- What has gone before? (cite a systematic review)
- Why was this study needed?
- Are there controversies?
- *Be sure readers understand the importance of the study*

The ideal methods (7)

- Should be given in such detail to enable the qualified reader to repeat the experiment
- Like a recipe

The ideal methods (7)

- For informed readers this is the most important section
- Describe how subjects were selected and excluded
- Statistics
- Ethical considerations
- *Remember you can put more detailed methods on the web (e.g., questionnaire)*

The ideal results (7)

- Stick to what is relevant (keep it simple)
- Include basic descriptive data

- The text should tell the story
- The tables give the evidence
- The figures illustrate the highlights

Avoid beginning to discuss the implications or strengths and weaknesses of your study

The ideal discussion (6)

- Statement of principal findings
- Thoughtful interpretation
- Meaning of the study and implications
- Limitations and strengths
- Unanswered questions and future research
- *Go easy on the last two, don't need to answer all the questions in the world*

Figures and tables

- Add information
- Save space
- Self-explanatory
- Not overloaded with numbers or ink

The ideal abstract

- Short
- Structured (check journal guidelines)
- Matches content of paper
- Conclusions only for results presented
- Concise summary in easy language

Spend more time on this as it may be the only thing read

THE IDEAL STYLE

Scientific writing style

- Use the present for established facts
- Use the past to report what you did
- Use the future to report what you will do
- Write short, sequential sentences
- Each sentence contains one main idea
- Be specific
- Do not include footnotes
- Do not use bold or underlining

Use active voice

- The verb constitutes the centre of gravity of a sentence
- Make sure the verb contains the key idea
- ✗ We conducted an investigation of the outbreak
- ✓ We investigated the outbreak
- ✗ We took a sample of the population
- ✓ We sampled the population
- ✗ We made an assessment of the situation
- ✓ We assessed the situation

Active better than passive voice

- **Passive voice**
 - A study was conducted
 - A sample was selected
 - Questionnaires were administered
- **Active voice**
 - We conducted a study
 - We selected a sample
 - Field workers administered the questionnaires

Scientific writing style

- Avoid qualifiers
 - “This was a very large outbreak”
- Avoid emphasis
 - “This is the largest outbreak ever reported as **thousands and thousands** of people were affected”
- Avoid accusations
 - “**Irresponsible behaviours** among health care workers lead to the spread of this Lassa fever outbreak”
- Avoid apologies
 - “Because of a lack of resources we could not...”
- Avoid “clearly”
 - If it is clear, you don’t need the word “clearly”

What happens if we don't model the ideal paper or ideal style for medical journals?

- Reviewers (editors) miss the main points and decline to review
- Reviewers become frustrated and give more negative reviews
- Reviewers request additional data/analysis
- Submissions or publication time takes much longer than it should

2 MAKING A MATCH

You

Your goals (and the goals of others)

Who do you want to reach?

Strength of your study design

Importance/novelty of the work

Journal

Vision/mission and *priorities*

Neighbours disagree on gang threat

By Nathan Aspin
In a quiet residential street in Toronto, a group of young men are talking. They are talking about a gang that has been spotted in the area. The gang is said to be active in the area and is causing concern among the residents. The residents are divided on whether the gang is a real threat or just a rumor.

ECONOMY RISK REAL: DODGE

Shrinking workforce must improve its productivity
By Jonathan Berman
The U.S. economy is facing a significant challenge as the workforce shrinks. This is due to a combination of factors, including an aging population and a decline in the birth rate. The result is a smaller workforce that must produce more goods and services to maintain the economy's growth.

Meeting's off, NHL tells Balsillie

By Patrick Brown
The National Hockey League has announced that it will not meet with the Ontario government to discuss a proposed arena. The NHL has stated that it is not interested in the arena and is not willing to negotiate with the province.

CLASS ACTION SOUGHT IN LAWSUIT OVER GM GASKET FAILURE E1

TORONTO STAR
THURSDAY, JUNE 04, 2008 • Edition: Metro

Transit windfall for Ontario

Cash from Ottawa will come in next week's budget to help with subway expansion — as well as leasing and campus buildings.
The province will receive a windfall of cash from Ottawa in next week's budget to help with subway expansion, as well as leasing and campus buildings. The cash is expected to be received in the next few weeks and will be used to fund various transit projects across the province.

FORBIDDEN THE IMAGE YOU AREN'T SUPPOSED TO SEE

One of the four London soldiers killed in Afghanistan is shown on a screen during a ceremony. The soldiers and their families are gathered for the occasion.

Return of fallen soldiers not meant for public eyes

By David S. Garrow
The return of fallen soldiers from Afghanistan is a somber occasion. The families of the fallen are gathered to see their loved ones brought home. The ceremony is a private affair, and the families are not meant to be the focus of public attention.

FLAGS Tale of two cities

By David S. Garrow
The story of the flags is a tale of two cities. In one city, the flags are a symbol of pride and honor. In the other city, they are a symbol of loss and grief. The flags represent the sacrifices made by the men and women in uniform.

Union Station's \$100M reno deal crumbles

Private plan in works for 6 years
Molloy relinks another extension

By David S. Garrow
The \$100 million renovation deal for Union Station has crumbled. The private plan that was in the works for six years is now being replaced by another extension. The project is still in the planning stages, and the timeline has been pushed back.

About The BMJ

Who we are, and what we stand for

The BMJ is defined by its mission: to work towards a healthier world for all. We share that global endeavour with millions of readers working in clinical practice, research, education, government, and with patients and the public too.

This mission defines us, far more than the format of our content. After nearly 180 years, our print edition still thrives, and has been joined by podcast, video, tweet, app, website and live events. But, as each of these formats gains ground or declines in importance, the things *The BMJ* cares about will endure:

- *Improving the creation and dissemination of research evidence*
- *Improving clinical education and practice*
- *Advocating for universal, equitable, high quality healthcare*
- *Championing the health and wellbeing of doctors*
- *Improving the social and environmental determinants of health*

While pursuing these goals, we commit to partnering with patients and the public to ensure their best interests are served; and to being as transparent and accountable as possible in everything we do.

The BMJ can be many things to its diverse audiences: an international research journal, a member magazine, a think tank, an investigative campaigner, an educational resource, even a trusted and inspiring friend. Whatever *The BMJ* means to you, we invite you to share our mission and join us in working towards a healthier world for all.

Information for Authors

■ [Guidelines for Authors PDF](#)

■ [Author forms](#)

The Lancet is an international general medical journal and invites submissions of any original contribution that advances or illuminates medical science or practice, or that educates or entertains the journal's readers. We publish research Articles, randomised controlled trials, meta-analyses, Reviews, Seminars, Personal Views, Comments, Correspondence, and additional Perspectives and World Reports. For more information on the types of papers and manuscript requirements please read the [Guidelines for Authors](#).

The journal is indexed in MEDLINE/PubMed, Scopus, and in the *Journal Citation Reports*™. *The Lancet* journals are signatories of the [Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly Work in Medical Journals](#) issued by the International Committee of Medical Journal Editors (ICMJE Recommendations) and to the Committee on Publication Ethics (COPE) code of conduct for editors. We follow [COPE's guidelines](#).

Whatever you have written, remember that it is the general reader whom you are trying to reach. One way to find out if you have succeeded is to show your draft to colleagues in other specialties. *If they do not understand, neither, very probably, will The Lancet's staff or readers.*

Call for papers - Addressing public health concerns in incarceration and community corrections

BMC Global and Public Health is calling for submissions to our Collection on addressing public health concerns in incarceration and community correction.

Submission status

Open

Submission deadline

02 December 2024

MOST IMPORTANT INGREDIENT

What's the most important thing your
paper contains?

A message

Message

- Your message is what your paper says
- Too many papers fail because it isn't absolutely clear what is being said
- If you cannot describe your message clearly, your writing will probably fail

Message

- A single sentence
- Contains a verb
- Not your objective
- Not your title

NO: We examined whether a special intervention improved skills in manuscript writing.

NO: An intensive, tailored training intervention to improve skills in manuscript writing: randomized controlled trial

YES: Intensive, tailored training improved skills in manuscript writing

Title vs message

Effect of local maternal and newborn stakeholder groups on neonatal mortality: cluster-randomized controlled trial

Facilitated local stakeholder groups increased attendance to antenatal care and reduced neonatal mortality

- Identify your message before writing
- Write your paper to your message (not the subject of your paper)

- First line of your abstract's Conclusion
- First line of your paper's Discussion
- Second paragraph of your covering letter
- Headline of your journal's press release

EXERCISE

Why does this matter?

- It will transform your writing and your publication success
- Define your message before writing
- Write your paper to your message (not the subject)
- Highly versatile tool (to get unstuck, get focused, regroup)

4 INTRODUCING THE FOUR STEP PROCESS

More time spent thinking =
less time struggling with writing

- **I**ntroduction
- **M**ethod
- **R**esults
- **(A**nd)
- **D**iscussion

I

M

R

D

An emerging structure from your message

- Why we started
- What we did
- What we found
- What it means

An emerging structure from your message

- Why we started → Introduction
- What we did → Methods
- What we found → Results
- What it means → Discussion

Get ready to get working!

- 1) Collect your ideas: *the thinking step*
MESSAGE
- 2) Download your information: *the organizing step* CONCEPT MAP (SPIDERGRAM)
- 3) Synthesize the information: *the outlining step*
OUTLINE
- 4) Draft your manuscript: *the writing step*
DRAFT

1) Collect your ideas: *the thinking step*

- What do I have to say?
 - What about my study do I want to share?
 - What did I find?
 - What is the message I want to put across?
-
- **Exercise:** define your message
 - Single sentence, contains a verb, 12 words

2) Download your information: *the organizing step*

- Why did we do this study?
- What did we do?
- What did we find?
- What does it mean?

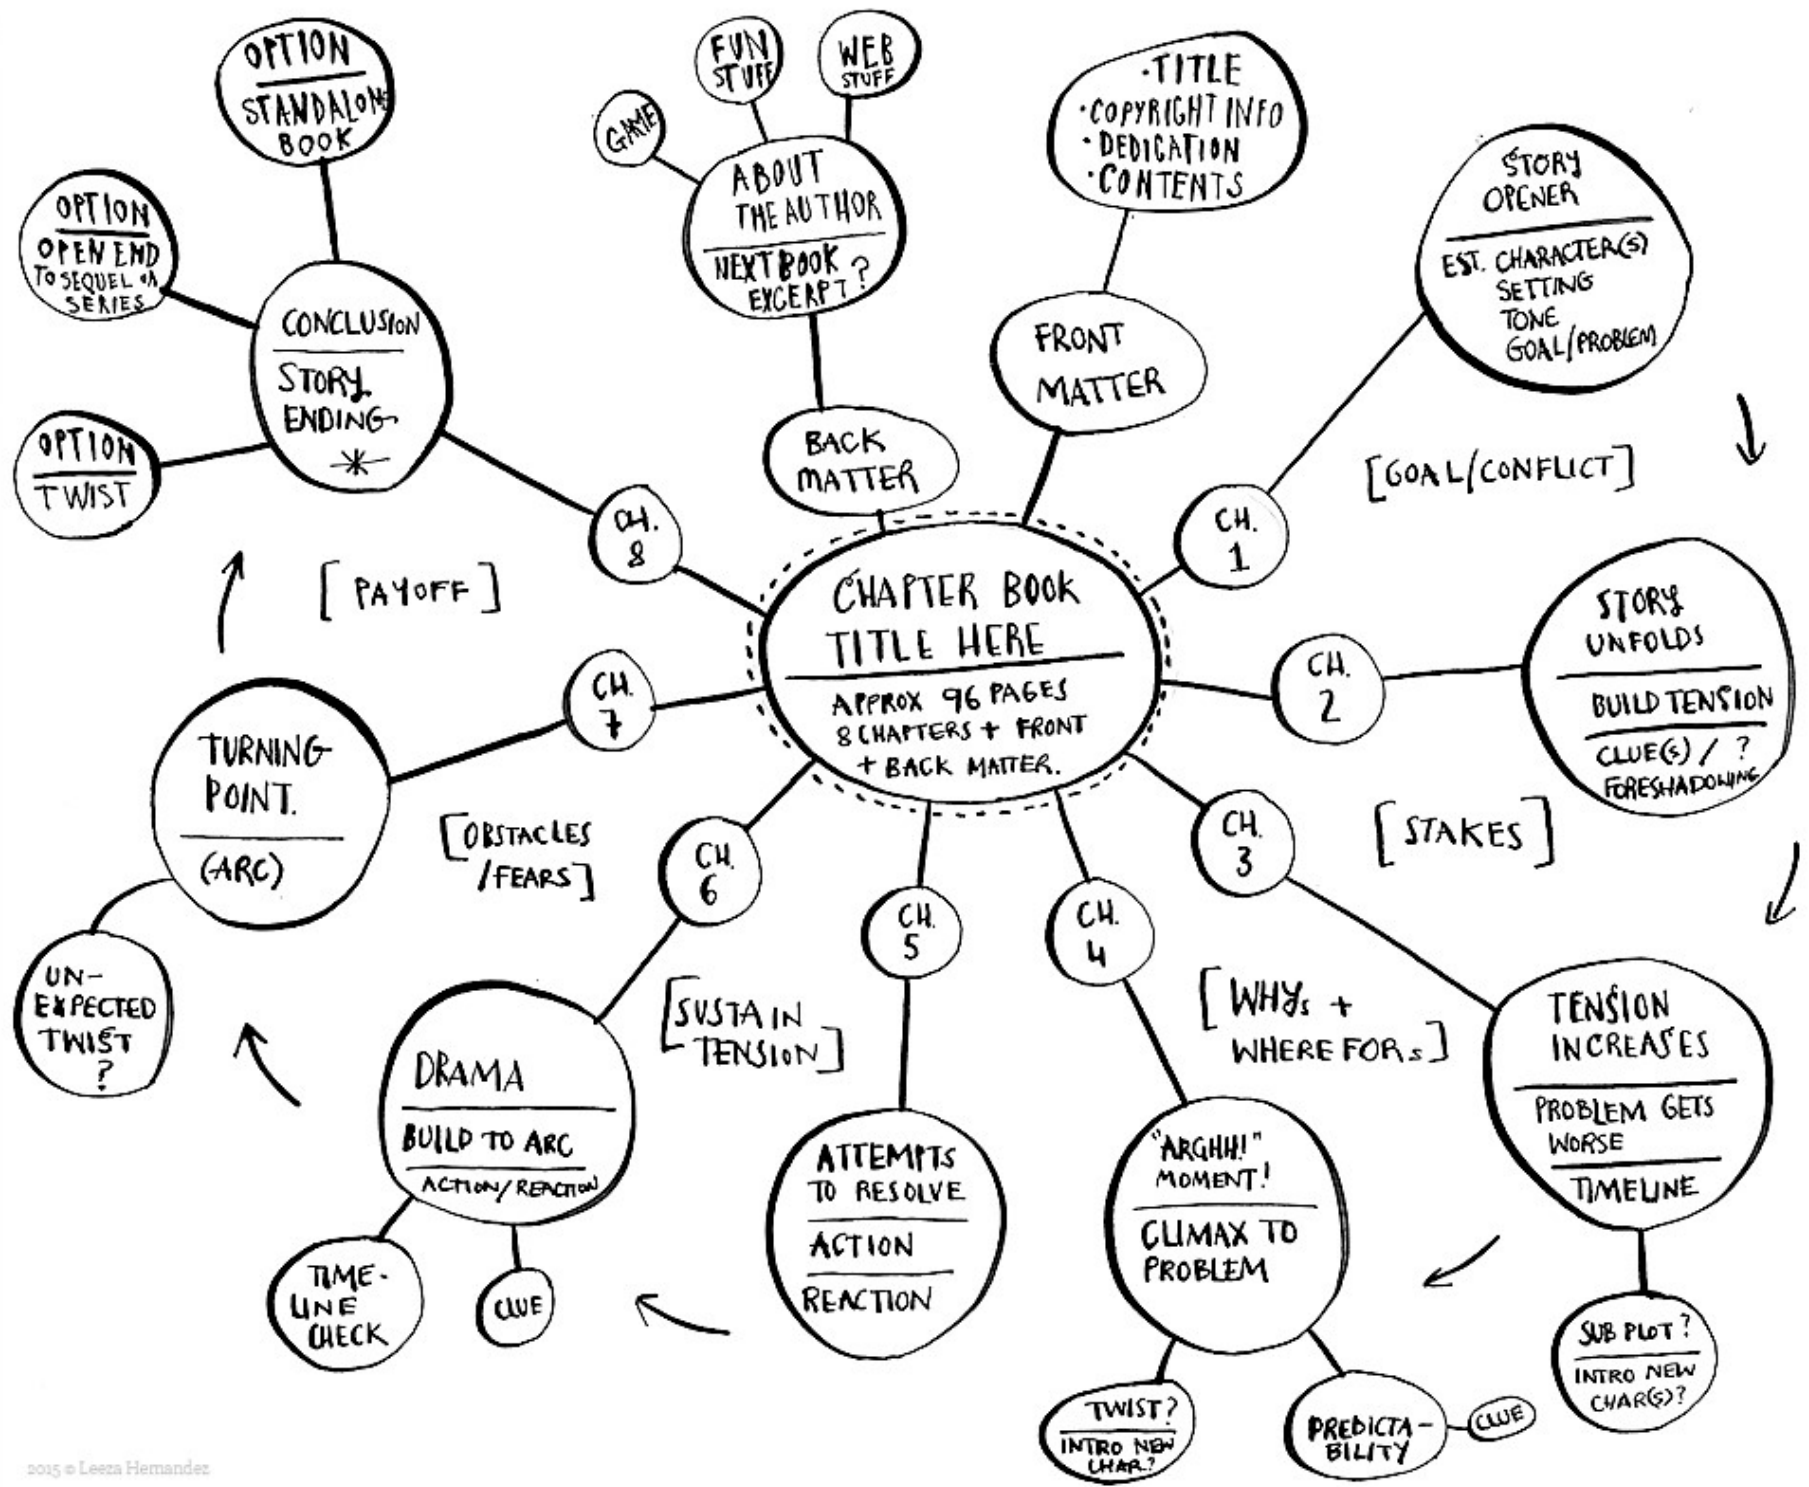

- **Exercise:** concept map

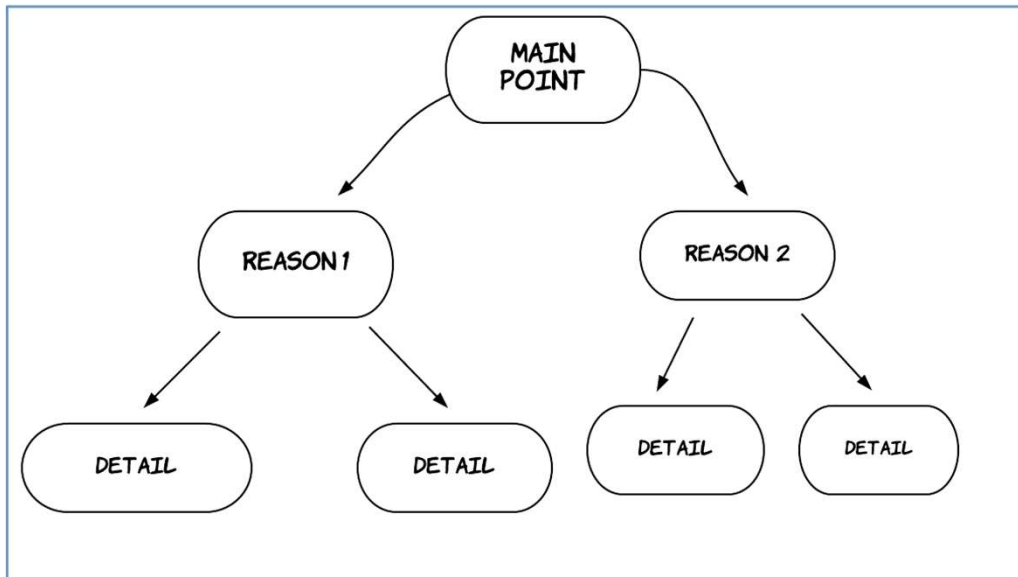

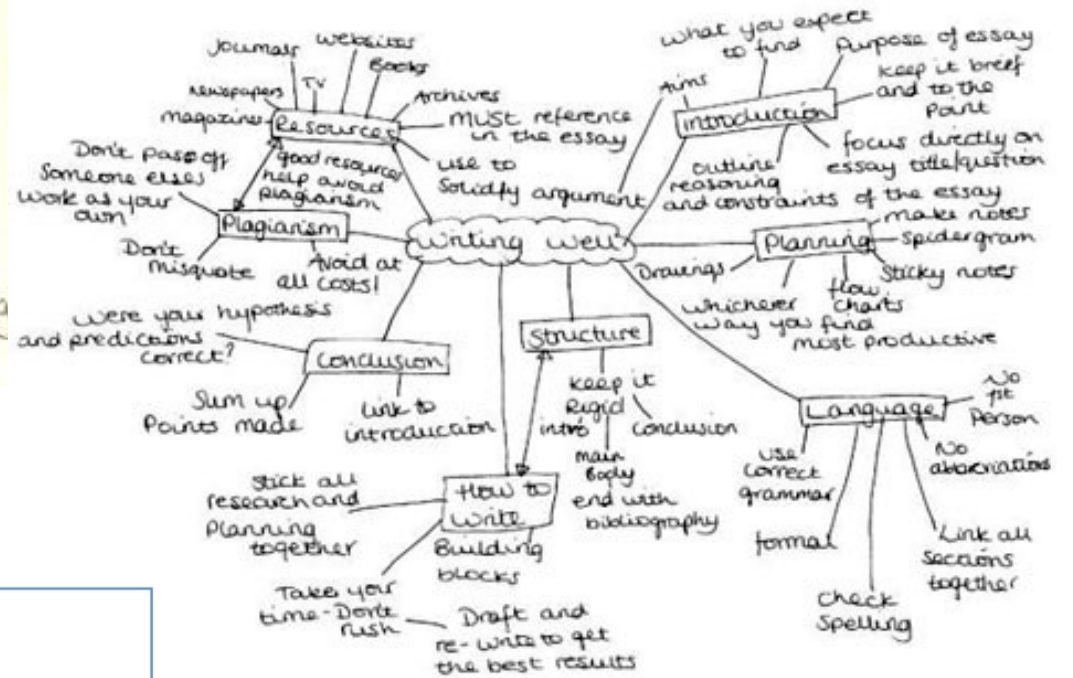

An emerging structure from your message

- Why we did the study → Introduction
- What we did → Methods
- What we found → Results
- What it means → Discussion

Concept map

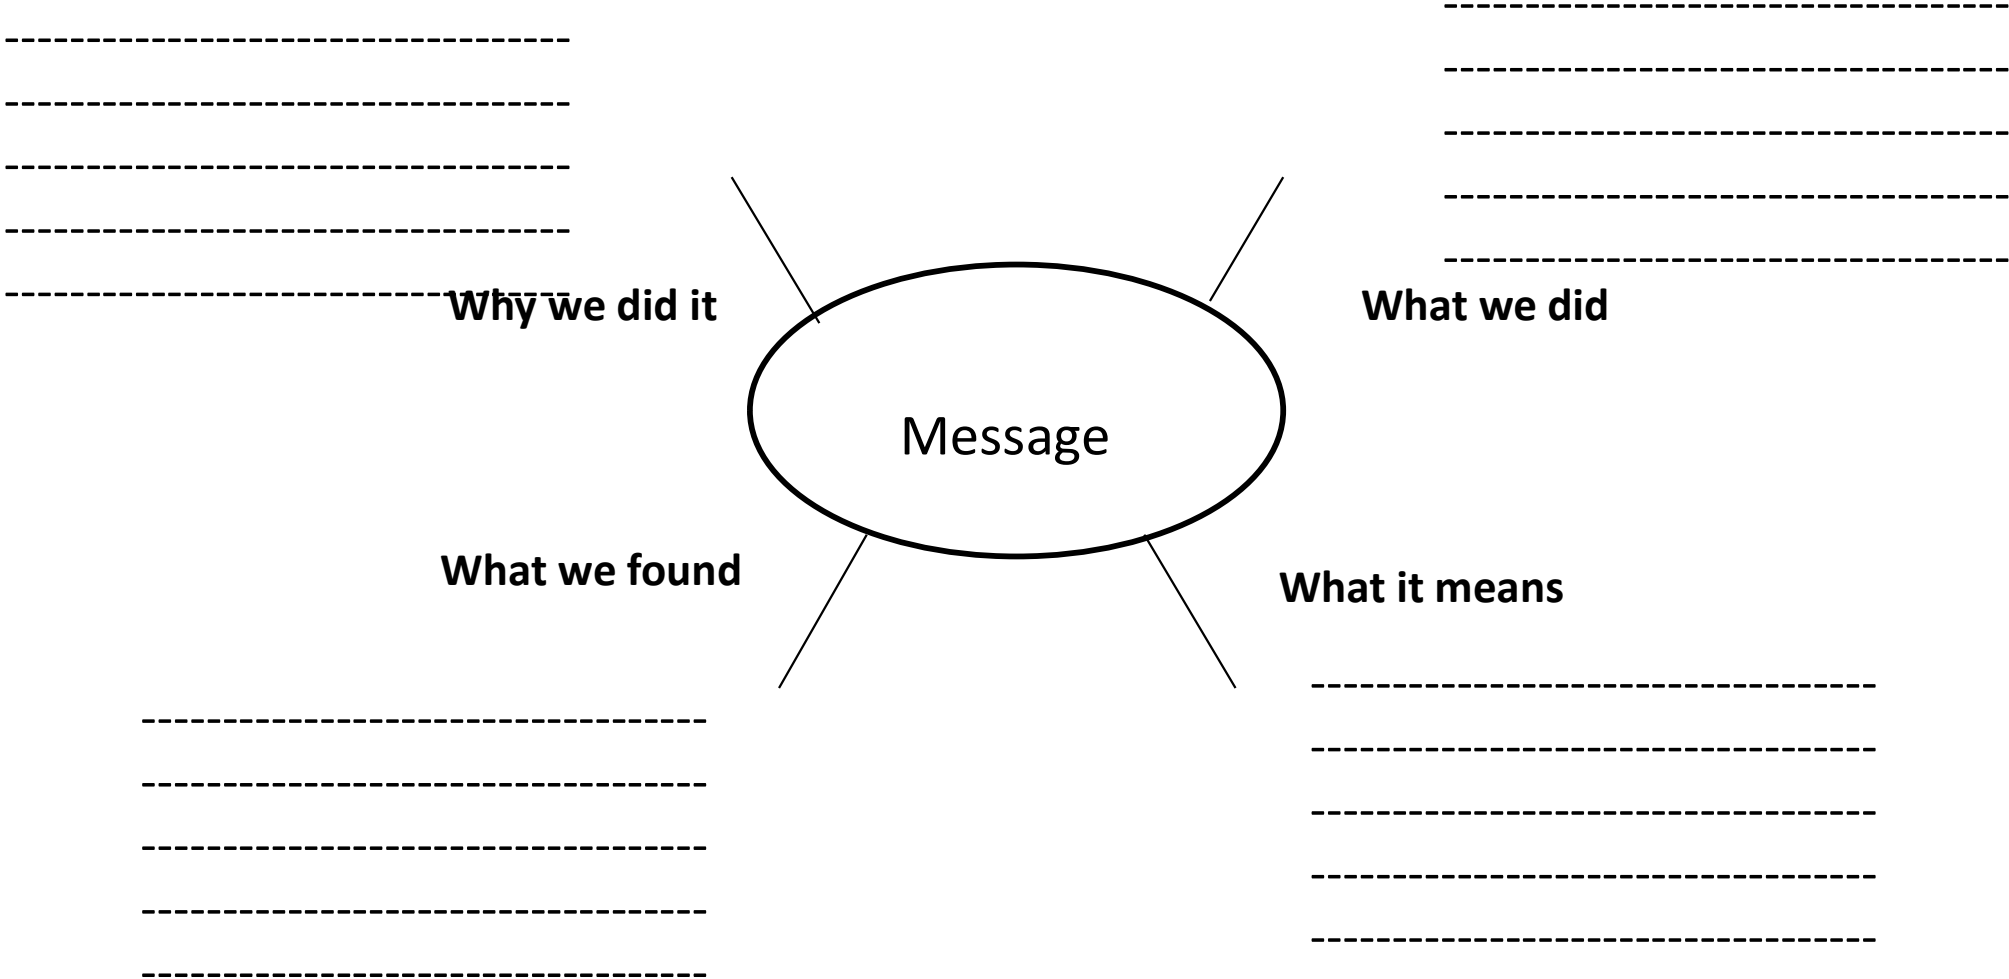

Concept map

C. Synthesize the information: *the outlining step*

- Introduction (*why did we do this study*)
 - Methods (*what did we do*)
 - Results (*what did we find*)
 - Discussion (*what does it mean*)
-
- **Exercise:** make a bullet-point outline

Worksheet: plan(s)

SECTIONS	PARA'S
<u>INTRO:</u>	1) lack of research in this area. 2) opportunity from RCT → contact.
<u>METHODS:</u>	1) contact via MIST. → sample/control group 2) letters/ phone calls 3) interviews. - semi-structured 4) data collection - me & tape 5) data analysis - NUDIST software 6) feedback sessions/focus groups.
<u>RESULTS:</u>	1) sample details. 2) variables - identified. 3) management 4) hospitals 5) age 6) previous pregnancies etc.
<u>Discussion</u>	1) what we found - ^{women's experience of pregnancy loss is influenced by management} 2) limitations 3) what it means 4) how it fits the context 5) implications for policy/prac 6) implications for research.

MESSAGE

- **Introduction**
 - 1 (Main point paragraph 1)
 - 2 (Main point paragraph 2)
- **Methods**
 - 1
 - 2
 - 3
 - 4
 - 5
 - 6
 - 7
- **Results**
 - 1
 - 2
 - 3
 - 4
 - 5
 - 6
 - 7
- **Discussion**
 - 1
 - 2
 - 3
 - 4
 - 5
 - 6

D. Draft your manuscript: *the writing step*

- Use a timer or your smartphone
- Write non-stop for 5 minutes (no stopping!)
- Use a yellow highlighter to pull out key points
- Do it again – write non-stop for 5 minutes

EXERCISE

1. Why did we do this study?
2. What did we do?
3. What did we find?
4. What does it mean?

EXERCISE

1. Introduction

Provide a context or background for the study –

State the specific purpose or research objective of, or hypothesis tested by

Do not include data or conclusions from the work being reported

2. Methods

- Selection and description of participants
- Study's main and secondary objectives
- Statistical methods

3. Results

- Give numeric results not only as derivatives (for example, percentages) but also as the absolute numbers
- Specify the statistical significance attached to them, if any.
- Mention any stratification and subgroup results.

4. Discussion

- Statement of principal finding (s)
- Explanation for finding
- Main strength and weaknesses
- Implications for future research

EXERCISE

Summary for today

- You need time for thinking before writing → prioritise thinking time
- You have a product to “sell” in the competitive marketplace
- Journals have different priorities and characters, and these are known to you
- Your target audience is your editor(s). To “win” you need to put your message across clearly

Thank you!
